

CHECKLIST ENVIRONMENTAL ASSESSMENT

Project Name:	2007 Land Banking – Lewistown Unit – NELO – Lease - # 7654
Proposed Implementation Date:	2008
Proponent:	This tract was nominated by the lessee, Haldemann Ranch, and brought forward now by the DNRC.
Location:	T28N, R20E, Sec. 36, All, 640-acres
County:	Blaine, County
Trust:	Common Schools

I. TYPE AND PURPOSE OF ACTION

Offer for Sale at Public Auction 640 acres of state land currently held in trust for the benefit of Common Schools. Revenue from the sale would be deposited in a special account, with monies from other sales around the State, to purchase replacement lands meeting acquisition criteria related to legal access, productivity, potential income and proximity to existing state ownership which would then be held in trust for the benefit of the same beneficiary Trusts in relative proportion. The proposed sale is part of a program called Land Banking authorized by the 2003 Legislature, and updated by the 2007 Legislature. The purpose of the program is for the Department of Natural Resources and Conservation to overall, diversify uses of land holdings of the various Trusts, improve the sustained rate of return to the Trusts, improve access to state trust land and consolidate ownership.

II. PROJECT DEVELOPMENT

1. PUBLIC INVOLVEMENT, AGENCIES, GROUPS OR INDIVIDUALS CONTACTED:

Provide a brief chronology of the scoping and ongoing involvement for this project.

- A letter was distributed in September 2004 to all state surface lessees informing them of the Land Banking Program and requesting nominations be submitted by lessees between October 1, 2004 and January 31, 2005. *(The lessee nominated tracts were proposed at that time and are now being considered as part of the second Statewide round of Land banking sales.)*
- A letter was sent April 3, 2007 to all state surface lessees of grazing tracts 80 acres and less in Chouteau, Hill, Blaine and Fergus Counties inquiring their interest in DNRC nominating these small acreage tracts for sale. The small acreage tracts that lessees were interested having sold were nominated by DNRC for sale.
- Legal notices for Hill and Blaine County land sales were published in The Havre Daily News on March 6, 13, 20, 2008, and in the Blaine County Journal, News opinion on March 5, 12, 19, and 26, 2008.
- Direct mailings were made to lessees, adjacent land owners, County Commissioners, and a host of organizations and individuals who had expressed previous interest in this process. A full listing of contacts is attached.
- Follow-up contacts were made by phone, mail, or email with parties requesting additional information. These are also included in the appendix.
- The tracts were also posted on the DNRC web page at, <http://dnrc/mt.gov//TLMSPublic/LandBanking/LBTest.aspx>

2. OTHER GOVERNMENTAL AGENCIES WITH JURISDICTION, LIST OF PERMITS NEEDED:

No other governmental agencies have jurisdiction over this proposal.

3. ALTERNATIVES CONSIDERED:

Alternative A (No Action) – Under this alternative, the State retains the existing land ownership pattern and would not sell the 640 acres of Common School Trust Land contained in Sec. 36, T28N, R20E.

Alternative B (the Proposed action) – Under this alternative, the Department would request and recommend approval by the Land Board to sell the proposed land locked tract. If approved by the Board, the sale would be at public auction, subject to the requirements found in Title 77, Chapter 2, Part 3 of the Montana Codes Annotated. The income from the sale would be pooled with other land sale receipts from across the State to fund the purchase of other state land, easements, or improvements for the beneficiaries of the respective trusts. *(The State would then review available lands for sale which would generally have access and an increased potential for income. A separate public scoping and review would be conducted when a potentially suitable parcel was found. It is not possible for this analysis to make any direct parcel to parcel comparisons.)*

III. IMPACTS ON THE PHYSICAL ENVIRONMENT

- *RESOURCES potentially impacted are listed on the form, followed by common issues that would be considered.*
- *Explain POTENTIAL IMPACTS AND MITIGATIONS following each resource heading.*
- *Enter "NONE" if no impacts are identified or the resource is not present.*

4. GEOLOGY AND SOIL QUALITY, STABILITY AND MOISTURE:

Consider the presence of fragile, compactable or unstable soils. Identify unusual geologic features. Specify any special reclamation considerations. Identify any cumulative impacts to soils.

A variety of soil types are found across this tract. USDA – NRCS soil survey indicated Land Capability Classification as a mixture of 3E, 4E, 4S, and 7E soils. The majority of the acres are class 4E and 7E soils within silty, thin hilly and shallow range sites. The landscape is rolling foot hills with areas of fairly steep slopes. The proposal does not involve any on the ground disturbance, so there are no soil effect differences between the alternatives. It is expected that this land will be used for livestock grazing in the future. The State owns, and would retain ownership of, all mineral rights associated with this tract.

No direct, indirect or cumulative impacts are anticipated as a result of the proposal.

5. WATER QUALITY, QUANTITY AND DISTRIBUTION:

Identify important surface or groundwater resources. Consider the potential for violation of ambient water quality standards, drinking water maximum contaminant levels, or degradation of water quality. Identify cumulative effects to water resources.

There is a record of a developed spring within this tract. A stock water right is associated with the spring and is listed below. If sold, the water right would be transferred to the purchaser. Other water quality and/or quality issue will not be impacted by the proposed action.

legal	Water right no.	purpose	Source	Priority date
S½NE¼NW¼, Sec. 36, T28N, R20E	40EJ 47298 00	Stock water	Developed Spring	6/25/1982

No direct, indirect or cumulative impacts are anticipated as a result of the proposal.

6. AIR QUALITY:

What pollutants or particulate would be produced? Identify air quality regulations or zones (e.g. Class I air shed) the project would influence. Identify cumulative effects to air quality.

The proposal does not include any on-the-ground activities, or changes to activities.

No direct, indirect or cumulative impacts are anticipated as a result of the proposal.

7. VEGETATION COVER, QUANTITY AND QUALITY:

What changes would the action cause to vegetative communities? Consider rare plants or cover types that would be affected. Identify cumulative effects to vegetation.

The acres proposed for sale are native rangeland typical of the Northern Mixed Grassed Prairie. Range sites are dominated by thin hilly/clayey sites with a small area containing a silty site. Species composition is dominated by grasses which include blue bunch wheatgrass, western wheatgrass, needle and thread grass, blue grama, thread leaf sedge, sandberg bluegrass, fringed sagewort, and prairie junegrass. Sub-dominate species include various forbs and shrubs. Small patches of Leafy spurge have been identified on this tract according to previous tract inspections. Current range conditions are rated between fair and good with an estimated average carrying capacity or stocking rate assessed at .24 AUMs per acre.

Vegetation may be affected by numerous land management activities including livestock grazing, development, wildlife management or other agricultural use. It is unknown what land use activities may be associated with a change in ownership; however the vegetation on this tract is typical of land throughout the vicinity and there are no known rare, unique cover types or vegetation on the tract. It is expected that this land will be used for grazing livestock in the future. The proposal does not include any on-the-ground activities, or changes to activities.

No direct, indirect or cumulative impacts are anticipated as a result of the proposal.

8. TERRESTRIAL, AVIAN AND AQUATIC LIFE AND HABITATS:

Consider substantial habitat values and use of the area by wildlife, birds or fish. Identify cumulative effects to fish and wildlife.

This tract provides habitat for a variety of big game species (mule deer, whitetail deer, pronghorn antelope), predators (coyote, fox, badger), upland game birds (sharp tail grouse, Hungarian partridge), other non-game mammals, raptors and various songbirds. The proposal does not include any land use change which would yield changes to the wildlife habitat. The proposed action will not impact wildlife forage, cover, or traveling corridors. Nor will this action change the juxtaposition of wildlife forage, water, or hiding and thermal cover.

There are no unique or critical wildlife habitats associated with the state tract and we do not expect direct or cumulative wildlife impacts would occur as a result of implementing the proposal. The proposed action will not have long-term negative effects on existing wildlife species and/or wildlife habitat because of its relatively small scale.

No direct, indirect or cumulative impacts are anticipated as a result of the proposal.

9. UNIQUE, ENDANGERED, FRAGILE OR LIMITED ENVIRONMENTAL RESOURCES:

Consider any federally listed threatened or endangered species or habitat identified in the project area. Determine effects to wetlands. Consider Sensitive Species or Species of special concern. Identify cumulative effects to these species and their habitat.

No specific on-site observations of Threatened or Endangered species have been recorded and no important habitats have been identified on the state lands. A review of Natural Heritage data through NRIS was conducted in November, 2007. The survey indicates that Greater Sage grouse (*Centrocercus urophasianus*) may occur in the area. This information is on file.

The proposal does not include any activities which would alter any habitat so no effects are expected.

No direct, indirect or cumulative impacts are anticipated as a result of the proposal.

10. HISTORICAL AND ARCHAEOLOGICAL SITES:

Identify and determine effects to historical, archaeological or paleontological resources.

Past DNRC field evaluation forms indicated that no cultural resources have been observed on this tract. A class III level inventory and subsequent evaluation of cultural and paleontological resources will be carried out if preliminary approval of the parcel nomination by the Board of Commissioners is received. Based on the results of the Class III inventory/evaluation the DNRC will, in consultation with the Montana State Historic Preservation Officer, assess direct and cumulative impacts.

No direct, indirect or cumulative impacts are anticipated as a result of the proposal.

11. AESTHETICS:

Determine if the project is located on a prominent topographic feature, or may be visible from populated or scenic areas. What level of noise, light or visual change would be produced? Identify cumulative effects to aesthetics.

This tract is located in a remote area of Blaine County Montana and not highly visible from a county road. The state land does not provide any unique scenic qualities not also provided on adjacent private lands. The proposal does not include any on-the-ground activities, so there would be no change to the aesthetics.

No direct, indirect or cumulative impacts are anticipated as a result of the proposal.

12. DEMANDS ON ENVIRONMENTAL RESOURCES OF LAND, WATER, AIR OR ENERGY:

Determine the amount of limited resources the project would require. Identify other activities nearby that the project would affect. Identify cumulative effects to environmental resources.

There are 5,165,870 acres of Trust land and more than 4.6 million acres of Common School surface ownership in Montana (TLMS power search, 11/29/2007). There are approximately 180,728 acres of Trust land in Blaine County. This proposal includes 640 acres in Blaine County, a small percentage of the state land within this County.

There are additional tracts of state land currently under consideration for sale through the Land Banking Program throughout the State. A total of 1239.50 acres of state land have been nominated for sale in Blaine County and approximately 20,000 total acres statewide. In Blaine County, the lands being considered for sale represent 0.68% of the State Trust surface ownership in Blaine County. The total statewide 20,000 acres being considered for sale represent 0.38% of the statewide Trust surface ownership.

The potential transfer of ownership will not have any impact or demands on environmental resources of Land water, air or energy.

No direct, indirect or cumulative impacts are anticipated as a result of the proposal.

13. OTHER ENVIRONMENTAL DOCUMENTS PERTINENT TO THE AREA:

List other studies, plans or projects on this tract. Determine cumulative impacts likely to occur as a result of current private, state or federal actions in the analysis area, and from future proposed state actions in the analysis area that are under MEPA review (scoped) or permitting review by any state agency.

There are no other projects or plans being considered on the tract listed on this EA.

No direct, indirect or cumulative impacts are anticipated as a result of the proposal.

IV. IMPACTS ON THE HUMAN POPULATION

- *RESOURCES potentially impacted are listed on the form, followed by common issues that would be considered.*
- *Explain POTENTIAL IMPACTS AND MITIGATIONS following each resource heading.*
- *Enter "NONE" if no impacts are identified or the resource is not present.*

14. HUMAN HEALTH AND SAFETY:

Identify any health and safety risks posed by the project.

No direct, indirect or cumulative impacts are anticipated as a result of the proposal.

15. INDUSTRIAL, COMMERCIAL AND AGRICULTURE ACTIVITIES AND PRODUCTION:

Identify how the project would add to or alter these activities.

The tract included in this proposal is leased by Haldemann Ranch for grazing. Sale of the land to the lessee would add to their ranching operation. Below is a table that indicates the State rated carrying capacity of the tract being considered for sale.

legal	acres	Lease #	State rated carrying capacity
All, Sec 36, T28N R20E	640	7654	151 AUMs

This proposal does not include any specific changes to the agricultural activities.

No direct, indirect or cumulative impacts are anticipated as a result of the proposal.

16. QUANTITY AND DISTRIBUTION OF EMPLOYMENT:

Estimate the number of jobs the project would create, move or eliminate. Identify cumulative effects to the employment market.

The proposal would have no direct or cumulative impacts on the quantity and distribution of employment.

No direct, indirect or cumulative impacts are anticipated as a result of the proposal.

17. LOCAL AND STATE TAX BASE AND TAX REVENUES:

Estimate tax revenue the project would create or eliminate. Identify cumulative effects to taxes and revenue.

State School Trust Lands are currently exempt from property tax. If State Trust Lands represent 6% or greater of the total acres within a county, a payment in lieu of taxes (PLT) is made to the counties to mitigate for the State Trust Land tax exempt status. Counties will not realize an adjustment in the PLT payment as a result of an increase or decrease in State Trust Land acreage.

No direct, indirect or cumulative impacts are anticipated as a result of the proposal.

18. DEMAND FOR GOVERNMENT SERVICES:

Estimate increases in traffic and changes to traffic patterns. What changes would be needed to fire protection, police, schools, etc.? Identify cumulative effects of this and other projects on government services

Being rural grazing lands, no traffic changes would be anticipated. All state and private land are under the County Coop wildfire protection program. The proposed sale will not change fire protections in the area.

No direct, indirect or cumulative impacts are anticipated as a result of the proposal.

19. LOCALLY ADOPTED ENVIRONMENTAL PLANS AND GOALS:

List State, County, City, USFS, BLM, Tribal, and other zoning or management plans, and identify how they would affect this project.

This tract is surrounded by private land. There are no zoning or other agency management plans affecting this land.

No direct, indirect or cumulative impacts are anticipated as a result of the proposal.

20. ACCESS TO AND QUALITY OF RECREATIONAL AND WILDERNESS ACTIVITIES:

Identify any wilderness or recreational areas nearby or access routes through this tract. Determine the effects of the project on recreational potential within the tract. Identify cumulative effects to recreational and wilderness activities.

This tract is not legally accessible to the general public because it is surrounded by private land and there are no public roads or easements across private land to the state land. If the tract is sold, hunting access would be controlled by the new landowner as is the current situation.

No direct, indirect or cumulative impacts are anticipated as a result of the proposal.

21. DENSITY AND DISTRIBUTION OF POPULATION AND HOUSING:

Estimate population changes and additional housing the project would require. Identify cumulative effects to population and housing

The proposal does not include any changes to housing or developments.

No direct, indirect or cumulative impacts are anticipated as a result of the proposal.

22. SOCIAL STRUCTURES AND MORES:

Identify potential disruption of native or traditional lifestyles or communities.

There are no native, unique or traditional lifestyles or communities in the vicinity that would be impacted by the proposal.

No direct, indirect or cumulative impacts are anticipated as a result of the proposal.

23. CULTURAL UNIQUENESS AND DIVERSITY:

How would the action affect any unique quality of the area?

The State Trust lands in this proposal are currently managed for grazing. The State lands are generally indistinguishable from the adjacent private lands, with no unique quality.

The potential sale of the state land would not directly or cumulatively impact cultural uniqueness or diversity. It is unknown what management activities would take place on the land if ownership was transferred.

No direct, indirect or cumulative impacts are anticipated as a result of the proposal.

24. OTHER APPROPRIATE SOCIAL AND ECONOMIC CIRCUMSTANCES:

Estimate the return to the trust. Include appropriate economic analysis. Identify potential future uses for the analysis area other than existing management. Identify cumulative economic and social effects likely to occur as a result of the proposed action.

legal	acres	2007 Lease Income	Income per acre
All, Sec 36, T28N R20E	640	\$1188.37	\$1.86

The statewide stocking rate for grazing land on 4.3 million acres averages .26 AUMs per acre or a total of 1.11 million AUMs (2006 DNRC Annual Report). 2006 statewide grazing land gross revenue was \$6.98 million (\$6.99 per AUM) on 4.3 million grazing acres for an average income of \$1.62 per acre (2006 DNRC annual Report). On average, this tract nominated for sale is slightly below the average statewide stocking rate at .24 AUMs / ac and slightly above the average income per acre for grazing land at \$1.86 / acre.

An appraisal of the property value has not been completed to date. Under DNRC rules, an appraisal would be conducted if preliminary approval to proceed is granted by the Board of Land Commissioners. The Department is conducting more detailed evaluations at this time in order to make a determination on whether to offer the tract for sale. The revenue generated from the sale of this parcel would be combined with other revenue in the Land Banking Account to purchase replacement property for the benefit of the Trust. It is anticipated the replacement property would have legal access and be adjacent to other Trust lands which would provide greater management opportunities and income. If replacement property was not purchased prior to the expiration of the statute, the revenue would be deposited into the permanent trust for investment.

EA Checklist Prepared By:	Name: Barny Smith	Date: April 2, 2008

V. FINDING

25. ALTERNATIVE SELECTED:

I have selected the Proposed Alternative B, recommend the tract receive preliminary approval for sale and continue with the Land Banking process.

26. SIGNIFICANCE OF POTENTIAL IMPACTS:

I have evaluated the comments received and potential environment affects and have determined significant environmental effects would not result from the proposed land sale. The tract does not have any unique characteristics, critical habitat or environmental conditions indicating the tract should necessarily remain under management by the Department of Natural Resources and Conservation. There are no indications the tract would produce substantially greater revenue or have substantially greater value to the trust in the near future.

This tract is entirely surrounded by private lands which control access to the state land and which will likely remain unchanged if the parcel is sold. It is likely the tract will continue to be managed in a manner consistent with the surrounding private land.

27. NEED FOR FURTHER ENVIRONMENTAL ANALYSIS:

☐ EIS

 ☐ More Detailed EA

 ☒ No Further Analysis
