

CHECKLIST ENVIRONMENTAL ASSESSMENT

Project Name:	Eastern Land Office Land Banking 2010 Sale #611
Proposed Implementation Date:	2011
Proponent:	Lessee: MYSSE RANCH CO
Location:	<u>T11N R35E S36, ALL</u>
County:	Rosebud

I. TYPE AND PURPOSE OF ACTION

Offer for Sale at Public Auction, 640 acres of state land currently held in trust for the benefit of Public Schools. Revenue from the sale would be deposited in a special account used to purchase replacement lands meeting acquisition criteria related to legal access, productivity, potential income and proximity to existing state ownership which would then be held in trust for the benefit of Public Schools. The proposed sale is part of a program called Land Banking authorized by the 2003 Legislature. The purpose of the program is for the Department of Natural Resources and Conservation to overall, diversify uses of land holdings of the various trusts, improve the sustained rate of return to the trusts, improve access to state trust land and consolidate ownership.

II. PROJECT DEVELOPMENT

1. PUBLIC INVOLVEMENT, AGENCIES, GROUPS OR INDIVIDUALS CONTACTED:

Provide a brief chronology of the scoping and ongoing involvement for this project.

- A letter was distributed in September 2004 to all state surface lessees informing them of the Land Banking Program and requesting nominations.
- Legal notices were published in the **Forsyth** Independent Press June 11th to June 20th 2010.
- Direct mailings were made to lessees, adjacent landowners, County Commissioners and other concerned parties.
- Follow-up contacts were made by phone and mail with parties requesting additional information.
- The tracts were also posted on the DNRC web page at:
<http://dnrc.mt.gov/TLMSPublic/LandBanking/LBTest.aspx>

2. OTHER GOVERNMENTAL AGENCIES WITH JURISDICTION, LIST OF PERMITS NEEDED:

None

3. ALTERNATIVES CONSIDERED:

Alternative A- No action, under this alternative the state would retain existing land ownership pattern and would not sell the tract of land.

Alternative B- Under this alternative, the Department would request and recommend approval by the Land Board to sell the proposed land locked tract. If approved by the board, the sale would be at public auction. The income from the sale would be pooled with other land sale receipts from across the state to fund the purchase of other state land, easements, or improvements for the beneficiaries of the respective trusts.

III. IMPACTS ON THE PHYSICAL ENVIRONMENT

- *RESOURCES potentially impacted are listed on the form, followed by common issues that would be considered.*
- *Explain POTENTIAL IMPACTS AND MITIGATIONS following each resource heading.*
- *Enter "NONE" If no impacts are identified or the resource is not present.*

4. GEOLOGY AND SOIL QUALITY, STABILITY AND MOISTURE:

Consider the presence of fragile, compactable or unstable soils. Identify unusual geologic features. Specify any special reclamation considerations. Identify any cumulative impacts to soils.

Alternative A- No Impact

Alternative B- The section is currently being grazed if sold the land will be used as a grazing tract with minimal disturbance occurring.

5. WATER QUALITY, QUANTITY AND DISTRIBUTION:

Identify important surface or groundwater resources. Consider the potential for violation of ambient water quality standards, drinking water maximum contaminant levels, or degradation of water quality. Identify cumulative effects to water resources.

Alternative- A No Impact Expected.

Alternative B- No Impacts Expected- There is no recorded water right associated with the proposed tract for sale. Other water quality and/or quantity issue will not be impacted by the proposed action.

6. AIR QUALITY:

What pollutants or particulate would be produced? Identify air quality regulations or zones (e.g. Class I air shed) the project would influence. Identify cumulative effects to air quality.

Pollutant and particulate levels are currently normal for the area; no increases in these levels are expected. The proposal does not include an on the ground activities, or changes to activities. Tract does not have any air quality regulations or zones.

Alternative A- No Impacts Expected

Alternative B- No Impacts Expected

7. VEGETATION COVER, QUANTITY AND QUALITY:

What changes would the action cause to vegetative communities? Consider rare plants or cover types that would be affected. Identify cumulative effects to vegetation.

The range site on this tract is considered to be low productive and include thin silty/shallow areas. Species composition is dominated by grasses which include Western Wheatgrass (*Agropyron smithii*), Green Needlegrass (*Stipa viridula*), Bluebunch Wheatgrass (*Agropyron spicatum*), Prairie Sandreed (*Calamovilfa longifolia*), Prairie Junegrass (*Koeleria pyramidata*), Threadleaf Sedge (*Carex filifolia*), Six Week Fescue (*Vulpia octoflora*), Sandberg Bluegrass (*Poa secunda*), Needle and Thread (*Stipa comata*) and Blue Grama (*Bouteloua gracilis*). Sub-dominate species include various forbs and woody species.

Vegetation may be affected by numerous land management activities including livestock grazing, development or wildlife management. It is unknown what land use activities may be associated with a change in ownership; however the vegetation on this tract is typical of land throughout the vicinity and there are no known rare, unique cover types or vegetation on the tract. It is expected that this tract will be used for grazing livestock in the future. The proposal does not include an on the ground activities or changes to activities and therefore we do not expect any direct or cumulative effects would occur to vegetation as a result of this proposal.

Alternative A- No Impact Expected

Alternative B- No Impact Expected- A search of the Montana Natural Heritage Database reveals that there are no rare plant species or cover types within the tracts mentioned.

8. TERRESTRIAL, AVIAN AND AQUATIC LIFE AND HABITATS:

Consider substantial habitat values and use of the area by wildlife, birds or fish. Identify cumulative effects to fish and wildlife.

The parcel of state trust land is used by a variety of wildlife species typical of use on undeveloped lands throughout the county. Wildlife populations can be affected by land use activities associated with livestock grazing, residential development or agricultural practices. The area provides habitat for a variety of big game species (mule deer, whitetail deer, pronghorn antelope), predators (coyote, fox, badger), upland game birds, other non-game mammals, raptors and various songbirds. Wildlife use on this section is not seasonal in nature.

Alternative A- No Impacts Expected

Alternative B- No Impacts Expected-Sage Grouse Habitat does occur in this section but no sage grouse were noted at time of inspection. The sale of this property may not affect the habitat if it stays under the current management.

9. UNIQUE, ENDANGERED, FRAGILE OR LIMITED ENVIRONMENTAL RESOURCES:

Consider any federally listed threatened or endangered species or habitat identified in the project area. Determine effects to wetlands. Consider Sensitive Species or Species of special concern. Identify cumulative effects to these species and their habitat.

Alternative A- No Impacts Expected

Alternative B- The habitat of the sensitive species Greater Sage has been noted in the area of this section. A search of the Montana Natural Heritage Program Database provided this information. The proposed Missouri Breaks Megasite does occur in this area however it should not be affected by the sale of the tract.

10. HISTORICAL AND ARCHAEOLOGICAL SITES:

Identify and determine effects to historical, archaeological or paleontological resources.

Alternative A- No Impacts Expected

Alternative B- No Impacts Expected

No *Antiquities*, as defined under the Montana State Historic Preservation Act, were identified.

11. AESTHETICS:

Determine if the project is located on a prominent topographic feature, or may be visible from populated or scenic areas. What level of noise, light or visual change would be produced? Identify cumulative effects to aesthetics.

This tract is located in a rural area of Rosebud County and is not highly visible from a county road. The state land does not provide any unique scenic qualities not also provided on adjacent private lands. The proposal does not include any on the ground activities; therefore there should be no change to the aesthetics in either alternative.

Alternative A- No Impacts Expected

Alternative B- No Impacts Expected- the existing use is expected to continue.

12. DEMANDS ON ENVIRONMENTAL RESOURCES OF LAND, WATER, AIR OR ENERGY:

Determine the amount of limited resources the project would require. Identify other activities nearby that the project would affect. Identify cumulative effects to environmental resources.

Alternative A- No Impacts Expected

Alternative B- No Impacts Expected- the existing use is expected to continue.

13. OTHER ENVIRONMENTAL DOCUMENTS PERTINENT TO THE AREA:

List other studies, plans or projects on this tract. Determine cumulative impacts likely to occur as a result of current private, state or federal actions in the analysis area, and from future proposed state actions in the analysis area that are under MEPA review (scoped) or permitting review by any state agency.

Alternative A- No Impacts Expected

Alternative B- No Impacts Expected- This parcel is a very remote Trust Land grazing parcel and the existing grazing use is expected to continue.

IV. IMPACTS ON THE HUMAN POPULATION
<ul style="list-style-type: none">• <i>RESOURCES potentially impacted are listed on the form, followed by common issues that would be considered.</i>• <i>Explain POTENTIAL IMPACTS AND MITIGATIONS following each resource heading.</i>• <i>Enter "NONE" if no impacts are identified or the resource is not present.</i>

14. HUMAN HEALTH AND SAFETY:

Identify any health and safety risks posed by the project.

Alternative A- No Impacts Expected

Alternative B- No Impacts Expected

15. INDUSTRIAL, COMMERCIAL AND AGRICULTURE ACTIVITIES AND PRODUCTION:

Identify how the project would add to or alter these activities.

Alternative A- No Impacts Expected

Alternative B- No Impacts Expected

16. QUANTITY AND DISTRIBUTION OF EMPLOYMENT:

Estimate the number of jobs the project would create, move or eliminate. Identify cumulative effects to the employment market.

Alternative A- No Impacts Expected

Alternative B- No Impacts Expected

17. LOCAL AND STATE TAX BASE AND TAX REVENUES:

Estimate tax revenue the project would create or eliminate. Identify cumulative effects to taxes and revenue.

If approved the tracts mentioned will move from tax exempt status to taxable status, which will provide income to the county, exact amount is unknown until the assessor appraisal is completed

18. DEMAND FOR GOVERNMENT SERVICES:

Estimate increases in traffic and changes to traffic patterns. What changes would be needed to fire protection, police, schools, etc.? Identify cumulative effects of this and other projects on government services

Alternative A- No Impacts Expected

Alternative B- No Impacts Expected

19. LOCALLY ADOPTED ENVIRONMENTAL PLANS AND GOALS:

List State, County, City, USFS, BLM, Tribal, and other zoning or management plans, and identify how they would affect this project.

Alternative A- No Impacts Expected

Alternative B- No Impacts Expected

20. ACCESS TO AND QUALITY OF RECREATIONAL AND WILDERNESS ACTIVITIES:

Identify any wilderness or recreational areas nearby or access routes through this tract. Determine the effects of the project on recreational potential within the tract. Identify cumulative effects to recreational and wilderness activities.

Alternative A- No Impacts Expected

Alternative B- No Impacts Expected

21. DENSITY AND DISTRIBUTION OF POPULATION AND HOUSING:

Estimate population changes and additional housing the project would require. Identify cumulative effects to population and housing.

Alternative A- No Impacts Expected

Alternative B- No Impacts Expected

22. SOCIAL STRUCTURES AND MORES:

Identify potential disruption of native or traditional lifestyles or communities.

Alternative A- No Impacts Expected

Alternative B- No Impacts Expected

23. CULTURAL UNIQUENESS AND DIVERSITY:

How would the action affect any unique quality of the area?

Alternative A- No Impacts Expected

Alternative B- No Impacts Expected

24. OTHER APPROPRIATE SOCIAL AND ECONOMIC CIRCUMSTANCES:

Estimate the return to the trust. Include appropriate economic analysis. Identify potential future uses for the analysis area other than existing management. Identify cumulative economic and social effects likely to occur as a result of the proposed action.

The tract currently has a grazing lease for 140 Animal Unit Months (.22 AUM/Acre) at an average rate of \$6.12/AUM and generating an income of \$840 or approximately \$1.31/acre. Based on the DNRC Annual Report for Fiscal Year 2004, the average income for the 4.3 million acres of grazing land was \$1.83/acre with an average productivity of .25 acres/ AUM. Therefore this tract is considered below average in productivity and producing below average revenue per acre. There is no indication the tract, if remaining in state ownership, would be used for purposes other than grazing and it is likely the future income would remain relatively stable. This tract overall looks to have low appreciation potential along with high administrative costs.

An appraisal of the property value has not been completed to date. Under DNRC rules, an appraisal would be conducted if preliminary approval to proceed is granted by the Board of Land Commissioners. The Department is conducting a more detailed evaluation at this time in order to make a determination on whether to offer this tract for sale. The revenue generated from the sale of this parcel would be combined with other revenue in the Land Banking account to purchase replacement property for the benefit of the trust. It is anticipated the replacement property would have legal access and be adjacent to other trust lands which would provide greater management opportunities and income. If replacement property was not purchased prior to expiration of the statute, the revenue would be deposited in the permanent trust for investment.

V. FINDING

25. ALTERNATIVE SELECTED:

Sell the tract of land

26. SIGNIFICANCE OF POTENTIAL IMPACTS:

The proposed sale of 640 acres of state trust lands through the DNRC's Land Banking Program would not result in nor cause significant environmental impacts. The low productivity (less than >25 acres / AUM), isolated nature of the parcel, lack of additional income generating capacity, and high administrative costs for this parcel fit within the criteria of parcels to sell identified in the Land Banking Program. It is also anticipated that the current land use activity of livestock grazing would be unchanged with the sale of this property. Considering these factors, an environmental assessment checklist is the appropriate level of analysis for the proposed action.

The sale of this parcel meets the overall goals and objectives of the Land Banking Program and would satisfy the trust fiduciary mandate.
