

CHECKLIST ENVIRONMENTAL ASSESSMENT

Project Name:	2015 Land Banking – Conrad Unit – CLO – FWP						
Proposed Implementation Date:	2015						
Proponent:	Montana Department of Natural Resources and Conservation (DNRC) at the request Montana Department of Fish, Wildlife and Parks (FWP)						
Location:	26N	8W	10	NW4SW4	Teton	CB	40
	26N	8W	16	Lots 1, 2, 4, 5, NW4, W2NE4, NW4SE4, N2SW4	Teton	CS	519.48
	26N	8W	17	NW4NW4, SE4NW4	Teton	CB	80
	Total (CB) Acres: 120.00 Total (CS) Acres: 519.48 Total Acres: 639.48						
County:	Teton County						
Trust:	Capitol Buildings (CB) and Commons Schools (CS)						

I. TYPE AND PURPOSE OF ACTION

The Department of Natural Resources and Conservation (DNRC) will consider offering for Sale at Public Auction 120.00 acres of state land currently held in trust for the benefit of Capitol Buildings and 519.48 acres of state land currently held in trust for the benefit of Common Schools. Revenue from the sale would be deposited in a special account, with monies from other sales around the State, to purchase replacement lands meeting acquisition criteria related to legal access, productivity, potential income, and proximity to existing state ownership which would then be held in trust for the benefit of the same beneficiary Trust in relative proportion. The 2003 State Legislature passed statutes (77-2-361 through 367 MCA) authorizing the Department of Natural Resources and Conservation (DNRC) to sell State School Trust Lands and utilize those funds to purchase replacement lands for the school trust through a process called Land Banking. The intent of the program is for the state to dispose of scattered tracts of land that generally do not have legal access, generate substantially less income for the trust than their relative value or are difficult for the DNRC to manage. The funds generated from sales are then used to purchase property that is blocked or contiguous to state land, has legal access, has potential for increased Trust revenue and consequently is more efficient to manage. In 2005 the Department began accepting nominations from lessees and DNRC personnel for state tracts to be considered for sale under the program. Nominations were evaluated and the State Board of Land Commissioners (Board) prioritized for sale. To date the DNRC and the Board has sold 66,180.00 acres and purchased 64,629.00 acres.

Two maps are attached to this EA checklist: 1. Labeled "Land Banking Priorities- Teton County" is a general map of all state land within that area of the county (blue) and those parcels of land considered for sale under land banking (dark blue). 2. Labeled "Appendix B" is a satellite imagery map that indicates the tracts considered for sale in the EA checklist.

II. PROJECT DEVELOPMENT

1. PUBLIC INVOLVEMENT, AGENCIES, GROUPS OR INDIVIDUALS CONTACTED:

Provide a brief chronology of the scoping and ongoing involvement for this project.

DNRC completed an extensive EA scoping and public comment process for this proposed land sale. This included advertisement for solicitation of public comments in local new papers, the DNRC website, adjacent land owners, and other interested parties. Attached are the DNRC scoping mailing list and a summary of the scoping issues.

2. OTHER GOVERNMENTAL AGENCIES WITH JURISDICTION, LIST OF PERMITS NEEDED:

No other governmental agencies have jurisdiction over this proposal.

3. ALTERNATIVES CONSIDERED:

Alternative A (No Action) – The DNRC retains the existing land ownership pattern and will not sell the 120.00 acres of state land currently held in trust for the benefit of Capitol Buildings Trust Land contained in Section 10 and Section 17, T26N, R8W and 519.48 acres of state land currently held in trust for the benefit of Common Schools Trust Land contained in Section 16, T26N, R8W. A lease agreement or license would be necessary to authorize FWP's use and management of State Trust Land within the Blackleaf WMA.

Alternative B (the Proposed action) – the DNRC would request and recommend approval by the Land Board to sell the 120.00 acres of state land currently held in trust for the benefit of Capitol Buildings Trust Land contained in Section 10 and Section 17, T26N, R8W and 519.48 acres of state land currently held in trust for the benefit of Common Schools Trust Land contained in Section 16, T26N, R8W. If approved by the Board, the sale would be at public auction, subject to the requirements found in Title 77, Chapter 2, Part 3 of the Montana Codes Annotated. The income from the sale would be pooled with other land sale receipts from across the State to fund the purchase of other state land, easements, or improvements for the beneficiaries of the respective trusts. *(The State would then review available lands for sale which would generally have access and an increased potential for income. A separate public scoping and review would be conducted when a potentially suitable parcel was found. It is not possible for this analysis to make any direct parcel to parcel comparisons.)*

III. IMPACTS ON THE PHYSICAL ENVIRONMENT

- *RESOURCES potentially impacted are listed on the form, followed by common issues that would be considered.*
- *Explain POTENTIAL IMPACTS AND MITIGATIONS following each resource heading.*
- *Enter "NONE" if no impacts are identified or the resource is not present.*

4. GEOLOGY AND SOIL QUALITY, STABILITY AND MOISTURE:

Consider the presence of fragile, compactable or unstable soils. Identify unusual geologic features. Specify any special reclamation considerations. Identify any cumulative impacts to soils.

The information listed below provides a general outline of the soil types on the tracts proposed for sale. USDA – NRCS soil survey indicated Land Capability Classification for Section 10, T26N, R8W as a mixture of 6S-98%, and 2%-7E soils. The 6S and 7E soils consisting of 40.00 acres are currently utilized for grazing. These classes of soil are generally not suitable for small grain crop production. This tract would not meet current DNRC breaking criteria as the soil types would not support small grain production. USDA – NRCS soil survey indicated Land Capability Classification for Section 16, T26N, R8W as a mixture of 6S-98%, and 2%-7E soils. The 6S and 7E soils consisting of 519.48 acres are currently utilized for grazing. These classes of soil are generally not suitable for small grain crop production. This tract would not meet current DNRC breaking criteria as the soil types would not support small grain production. USDA – NRCS soil survey indicated Land Capability Classification for Section 17, T26N, R8W as a mixture of 6S-53%, and 47%-7E soils. The 6S and 7E soils consisting of 80.00 acres are currently utilized for grazing. These classes of soil are generally not suitable for small grain crop production. This tract would not meet current DNRC breaking criteria as the soil types would not support small grain production. *(If properly managed, soils in classes 1, 2, 3, 4 are suitable for the mechanized production of commonly grown field crops and for pasture and woodland. The degree of the soil limitations affecting the production of cultivated crops increases progressively from class 1 to class 5. The limitations can affect levels of production and the risk of permanent soil deterioration caused by erosion and other factors. Soils in classes 5, 6, 7 are generally not suitable for mechanized*

productions without special management. Capability subclasses indicate the dominant limitations in the class, E, shows that the main hazard is the risk of erosion unless a close growing plant cover is maintained. Capability subclasses indicate the dominant limitations in the class "S" shows that the soil is limited mainly because it is shallow, droughty, or stony. " From USDA-NRCS Soil Survey).

Topography is rolling to steep slopes composed of native rangeland. Soils are stable due to permanent vegetation cover being maintained upon the tracts. These tracts are surrounded by native rangeland contained in large pastures used for grazing and wildlife management. It is unlikely these tracts would be broke for agricultural production in the future as they have been historically used as wildlife management and grazing land. The proposal does not involve any on the ground disturbance, so there are no soil effect differences between the alternatives. It is expected that this land will be used for livestock grazing in the future.

The State owns certain minerals under these parcels and would retain ownership of these mineral rights if the tracts are sold.

Alternative A (No Action) – Montana FWP will continue to manage the Trust Parcels in the same fashion under the current lease agreement. No impacts to the geology, soil quality, stability or moisture would occur as a result of the no-action alternative.

Alternative B (Proposed Action) – Montana FWP has indicated if they purchased these tracts, the land use would remain as a wildlife management area. The proposal does not involve any on the ground disturbance, so no soil impacts are anticipated. No cumulative impacts to the geology, soil quality, stability or moisture would occur as a result of the proposed action.

5. WATER QUALITY, QUANTITY AND DISTRIBUTION:

Identify important surface or groundwater resources. Consider the potential for violation of ambient water quality standards, drinking water maximum contaminant levels, or degradation of water quality. Identify cumulative effects to water resources.

There are no water rights listed for Section 10, 16, and 17, T26N, R8W. Other water quality and/or quantity issue will not be impacted by the proposed action as no change in land use is expected.

Alternative A (No Action) – Montana FWP will continue to manage the Trust Parcels in the same fashion under the current lease agreement. No impacts to water resources would occur as a result of the no-action alternative.

Alternative B (Proposed Action) – Montana FWP has indicated if they purchased these tracts, the land use would remain as a wildlife management area. Existing water rights and other water related issues would not be affected by the proposed action. Other water quality and/or quantity issue will not be impacted by the proposed action as no change in land use is expected.

6. AIR QUALITY:

What pollutants or particulate would be produced? Identify air quality regulations or zones (e.g. Class I air shed) the project would influence. Identify cumulative effects to air quality.

The proposal does not include any on-the-ground activities, or changes to activities. No effects to air quality would occur.

Alternative A (No Action) – Montana FWP will continue to manage the Trust Parcels in the same fashion under the current lease agreement. No impacts to air quality would occur as a result of the no-action alternative.

Alternative B (Proposed Action) – Montana FWP has indicated if they purchased these tracts, the land use would remain as a wildlife management area. The proposal does not include any on-the-ground activities, or changes to activities. No effects to air quality would occur as no change in land use is expected.

7. VEGETATION COVER, QUANTITY AND QUALITY:

What changes would the action cause to vegetative communities? Consider rare plants or cover types that would be affected. Identify cumulative effects to vegetation.

The acres proposed for sale consist of 639.48 acres of grazing land (native rangeland). Grazing land is typical of the Foothills and Mountains, 15-19" precipitation zone. No commercial timber is present. Range sites are dominated by shallow to gravel (Limber Pine and Douglas Fir Over story) and sub irrigated sites. Species composition is dominated by grasses which include rough fescue, blue-bunch wheatgrass, green needle grass, Idaho fescue, thread leaf sedge, Kentucky bluegrass, Timothy, and prairie junegrass. Sub-dominate species include various forbs and shrubs. Noxious weeds have not been identified according to previous inspections. Current range condition is good on Section 10, T26N, R8W with an estimated carrying capacity or stocking rate assessed at 0.125 AUMs per acre. Current range condition is good on Section 16, T26N, R8W with an estimated carrying capacity or stocking rate assessed at 0.206 AUMs per acre. Current range condition is good on Section 17, T26N, R8W with an estimated carrying capacity or stocking rate assessed at 0.113 AUMs per acre.

A review of Natural Heritage data through the NRIS was conducted for T26N, R8W: There were five plant species of concern noted and one potential species of concern noted on the NRIS survey. Dicots-Autumn Willow. Monocots-Crawe's Sedge, Simple Kobresia, Rolland's Bullrush, and Small Yellow Lady's-slipper. Bryophytes-Scorpidium Moss.

Alternative A (No Action) – Montana FWP will continue to manage the Trust Parcels in the same fashion under the current lease agreement. No impacts to vegetation cover, quantity and quality would occur as a result of the no-action alternative.

Alternative B (Proposed Action) – Montana FWP has indicated if they purchased these tracts, the land use would remain as a wildlife management area. Vegetation may be affected by numerous land management activities including livestock grazing, development, wildlife management, or other agricultural uses. Besides five plant species of concern, the vegetation on these tracts is typical of land throughout the vicinity and there are no known rare, unique cover types or vegetation in this area. It is expected that these lands will remain used for wildlife management purposes. Fish, Wildlife, and Parks has indicated if they purchased these lands, the land use would not change. The proposal does not include any on-the-ground activities, or changes to activities and therefore DNRC does not expect direct, indirect, or cumulative effects to the vegetation as a result of the proposal.

8. TERRESTRIAL, AVIAN AND AQUATIC LIFE AND HABITATS:

Consider substantial habitat values and use of the area by wildlife, birds or fish. Identify cumulative effects to fish and wildlife.

The area is considered critical wildlife habitat. These tracts provide habitat for a variety of big game species (mule deer, whitetail deer, and pronghorn antelope), predators (grizzly bear, black bear, coyote, fox, and badger), upland game birds (sharp tail grouse and Hungarian partridge), other non-game mammals, raptors and various songbirds. The proposal does not include any land use change which would yield changes to the wildlife habitat. The proposed action will not impact wildlife forage, cover, or traveling corridors. Nor will this action change the juxtaposition of wildlife forage, water, or hiding and thermal cover.

Alternative A (No Action) – Montana FWP will continue to manage the Trust Parcels in the same fashion under the current lease agreement.

Alternative B (Proposed Action) – Montana FWP has indicated if they purchased these tracts, the land use would remain as a wildlife management area. There are no unique or critical wildlife habitats associated with the state tracts and DNRC does not expect direct or cumulative wildlife impacts would occur as a result of implementing the proposal. The proposed action will not have long-term negative affects on existing wildlife species and/or wildlife habitat.

9. UNIQUE, ENDANGERED, FRAGILE OR LIMITED ENVIRONMENTAL RESOURCES:

Consider any federally listed threatened or endangered species or habitat identified in the project area. Determine effects to wetlands. Consider Sensitive Species or Species of special concern. Identify cumulative effects to these species and their habitat.

The tracts considered for sale are located in the NCD grizzly bear recovery zone.

A review of Natural Heritage data through the NRIS was conducted for T26N, R8W. There were twenty animal species of concern, zero potential species of concern, and zero special status species noted on the NRIS survey: Mammals-Wolverine, Hoary Bat, Fisher, Fringed Myotis, Pygmy Shrew, Merriam's Shrew, and Grizzly Bear. Birds-Sprague's Pipit, Golden Eagle, Veery, Alder Flycatcher, Peregrine Falcon, Clark's Nutcracker, Long-billed Curlew, Horned Grebe, Boreal Chickadee, McCown's Longspur. Fish-Northern Redbelly Dace, Northern Redbelly X Finescale Dace, and Westslope Cutthroat Trout.

Alternative A (No Action) – Montana FWP will continue to manage the Trust Parcels in the same fashion under the current lease agreement. Therefore, no direct, indirect, or cumulative effects are expected to these species of concern.

Alternative B (Proposed Action) – Threatened or endangered species, sensitive habitat types, or other species of special concern or potential species of concern will not be impacted because no management changes are expected from the sale of the tracts. No direct, indirect, or cumulative effects are expected to these species of concern.

10. HISTORICAL AND ARCHAEOLOGICAL SITES:

Identify and determine effects to historical, archaeological or paleontological resources.

Scoping letters were sent to all Tribal Historic Preservation Officers (THPOs) in the state, as well as the Nez Perce and Fort Hall Shoshone-Bannock Tribes in Idaho. No response was returned that identified a specific cultural resource issue. A Class I (literature review) level review was conducted by the DNRC staff archaeologist for the School Trust parcels proposed for sale. This entailed inspection of project maps, DNRC's sites/site leads database, land use records, General Land Office Survey Plats, and control cards.

The Class I search results revealed that no cultural or paleontologic resources have been documented on the subject School Trust parcels. To date, however, a professional cultural/paleontologic resources survey has not occurred on these tracts, so it is unknown if such resources actually exist. Sale of the DNRC administered School Trust parcels to the Montana Department of Fish, Wildlife and Parks (FWP), will have No Effect on Antiquities. This is because FWP is also a state land managing agency with the same statutory mandates as DNRC under the Montana State Antiquities Act.

Alternative A (No Action) – Montana FWP will continue to manage the Trust Parcels in the same fashion under the current lease agreement. Therefore, no direct, indirect, or cumulative effects are expected to historical, archaeological or paleontological resources.

Alternative B (Proposed Action) – Montana FWP has indicated if they purchased these tracts, the land use would remain as a wildlife management area. The proposal does not include any on-the-ground activities, or changes to activities. There are no unique or critical historical, archaeological or paleontological resources associated with the state tracts and DNRC does not expect direct or cumulative wildlife impacts would occur as a result of implementing the proposal.

11. AESTHETICS:

Determine if the project is located on a prominent topographic feature, or may be visible from populated or scenic areas. What level of noise, light or visual change would be produced? Identify cumulative effects to aesthetics.

These tracts are located in a rural agricultural area in the foothills on the Rocky Mountain Front. While view and vistas are scenically grand, the state land does not provide any unique scenic qualities not also encountered on adjacent private and public lands.

Alternative A (No Action) – Montana FWP will continue to manage the Trust Parcels in the same fashion under the current lease agreement. No impacts to aesthetics would occur as a result of the no-action alternative.

Alternative B (Proposed Action) – Montana FWP has indicated if they purchased these tracts, the land use would remain as a wildlife management area. The proposal does not include any on-the-ground activities, so there would be no change to the aesthetics regarding the proposed alternative.

12. DEMANDS ON ENVIRONMENTAL RESOURCES OF LAND, WATER, AIR OR ENERGY:

Determine the amount of limited resources the project would require. Identify other activities nearby that the project would affect. Identify cumulative effects to environmental resources.

There are 5,184,399.00 acres of Trust land, 184,527.00 acres of Public Building surface ownership, and 4,625,271.00 acres of Common Schools surface ownership in Montana, (TLMD, 2014 Annual Report).

There are approximately 77,094.74 acres of Common Schools Trust in Teton County and 304,552.22 acres of Common School Trust in the Conrad Unit, (TLMS). This proposal includes 519.48 acres in Teton County, a small percentage of the state land within this County.

There are approximately 22,196.37 acres of Capitol Buildings Trust in Teton County and 41,758.62 acres of Capitol Buildings Trust in the Conrad Unit, (TLMS). This proposal includes 120.00 acres in Teton County, a small percentage of the state land within this County.

There are additional tracts of state land currently under consideration for sale through the Land Banking Program. No additional acres of state trust land in Teton County are being considered. Cumulatively, these lands considered for sale represent 0.64% of the state trust land surface ownership in Teton County and 0.18% of the state trust land in Conrad Unit surface ownership.

Alternative A (No Action) – Montana FWP will continue to manage the Trust Parcels in the same fashion under the current lease agreement. No impacts to environmental resources would occur as a result of the no-action alternative.

Alternative B (Proposed Action) – Montana FWP has indicated if they purchased these tracts, the land use would remain as a wildlife management area. The potential transfer of ownership will not have any impact or demands on environmental resources of land water, air, or energy.

13. OTHER ENVIRONMENTAL DOCUMENTS PERTINENT TO THE AREA:

List other studies, plans or projects on this tract. Determine cumulative impacts likely to occur as a result of current private, state or federal actions in the analysis area, and from future proposed state actions in the analysis area that are under MEPA review (scoped) or permitting review by any state agency.

There are no other projects or plans being considered on the tracts listed on this EA.

IV. IMPACTS ON THE HUMAN POPULATION

- *RESOURCES potentially impacted are listed on the form, followed by common issues that would be considered.*
- *Explain POTENTIAL IMPACTS AND MITIGATIONS following each resource heading.*
- *Enter "NONE" if no impacts are identified or the resource is not present.*

14. HUMAN HEALTH AND SAFETY:

Identify any health and safety risks posed by the project.

Alternative A (No Action) – Montana FWP will continue to manage the Trust Parcels in the same fashion under the current lease agreement. No impacts to human health and safety would occur as a result of the no-action alternative.

Alternative B (Proposed Action) – Montana FWP has indicated if they purchased these tracts, the land use would remain as a wildlife management area. The potential transfer of ownership will not pose any greater to risk of human health and safety.

15. INDUSTRIAL, COMMERCIAL AND AGRICULTURE ACTIVITIES AND PRODUCTION:

Identify how the project would add to or alter these activities.

The tracts included in this proposal are leased by FWP for grazing. Sale of the land to FWP would add to their management operations. Below is a table that indicates the DNRC rated carrying capacity of the tracts being considered for sale.

Legal	Acres	Lease #	State rated carrying capacity
Section 10, T26N, R8W	40.00	6432	5 AUM's
Section 16, T26N, R8W	519.48	898	107 AUM's
Section 17, T26N, R8W	80.00	6432	9 AUM's
Total	639.48		121 AUMs

Alternative A (No Action) – Montana FWP will continue to manage the Trust Parcels in the same fashion under the current lease agreement. No impacts to industrial, commercial or agricultural activities would occur as a result of the no-action alternative.

Alternative B (Proposed Action) – Montana FWP has indicated if they purchased these tracts, the land use would remain as a wildlife management area. This proposal does not include any specific changes to the current activities. Sale of the land to FWP would enhance their FWP's management options. No direct or cumulative impacts are anticipated as a result of the proposal.

16. QUANTITY AND DISTRIBUTION OF EMPLOYMENT:

Estimate the number of jobs the project would create, move or eliminate. Identify cumulative effects to the employment market.

Alternative A (No Action) – Montana FWP will continue to manage the Trust Parcels in the same fashion under the current lease agreement. No impacts to quantity and distribution of employment would occur as a result of the no-action alternative.

Alternative B (Proposed Action) – Montana FWP has indicated if they purchased these tracts, the land use would remain as a wildlife management area. This proposal does not include any specific changes to the current activities. The proposal would have no impacts on quantity and distribution of employment.

17. LOCAL AND STATE TAX BASE AND TAX REVENUES:

Estimate tax revenue the project would create or eliminate. Identify cumulative effects to taxes and revenue.

State School Trust Lands and Public Buildings Trust Lands are currently exempt from property tax. If State Trust Lands represent 6% or greater of the total acres within a county, a payment in lieu of taxes (PLT) is made to the counties to mitigate for the State Trust Land tax exempt status. Counties will not realize an adjustment in the PLT payment as a result of an increase or decrease in State Trust Land acreage.

Alternative A (No Action) – Montana FWP will continue to manage the Trust Parcels in the same fashion under the current lease agreement with DNRC retaining ownership. Since Trust Land is tax exempt, local and state tax base and revenues would not be impacted as a result of the no-action alternative.

Alternative B (Proposed Action) – Montana FWP lands are not tax exempt. If the parcels in this proposal were sold to FWP and the use continued as a wildlife management area, Teton County would receive additional property tax revenues.

18. DEMAND FOR GOVERNMENT SERVICES:

Estimate increases in traffic and changes to traffic patterns. What changes would be needed to fire protection, police, schools, etc.? Identify cumulative effects of this and other projects on government services

These tracts are remote, mountain grazing lands with no public roads. All state and private land are protected by Teton County (Bynum and Choteau VFD) in conjunction with the County Coop Fire Program and mutual aid agreements with adjacent county fire departments and the Lewis and Clark National Forest.

Alternative A (No Action) – Montana FWP will continue to manage the Trust Parcels in the same fashion under the current lease agreement. No impacts to the demand for government services regarding traffic or fire protection would occur as a result of the no-action alternative.

Alternative B (Proposed Action) – The change in ownership as a result of this proposal will have no impact to the demand for government services regarding traffic or fire protection

19. LOCALLY ADOPTED ENVIRONMENTAL PLANS AND GOALS:

List State, County, City, USFS, BLM, Tribal, and other zoning or management plans, and identify how they would affect this project.

These tracts are surrounded by and/or adjacent to private and FWP land. There are no zoning or other agency management plans affecting these lands.

Alternative A (No Action) – Montana FWP will continue to manage the Trust Parcels in the same fashion under the current lease agreement. No impacts to the demand for government services regarding traffic or fire protection would occur as a result of the no-action alternative.

Alternative B (Proposed Action) – The change in ownership as a result of this proposal will have no impact to the demand for government services regarding traffic or fire protection.

20. ACCESS TO AND QUALITY OF RECREATIONAL AND WILDERNESS ACTIVITIES:

Identify any wilderness or recreational areas nearby or access routes through this tract. Determine the effects of the project on recreational potential within the tract. Identify cumulative effects to recreational and wilderness activities.

FWP provides public access to all of these school trust land tracts from May 15 to December 1. Outside of this time frame, DNRC and the general public does not have legal access to school trust lands within the Blackleaf WMA. However, FWP has always provided administrative access when requested by DNRC. Recreational values are high due to these tracts being contained in the Blackleaf WMA.

Alternative A (No Action) – Montana FWP will continue to manage the Trust Parcels in the same fashion under the current lease agreement. No impacts to wilderness and recreational activities would occur as a result of the no-action alternative.

Alternative B (Proposed Action) – Montana FWP has indicated if they purchased these tracts, the land use would remain as a wildlife management area. The potential transfer of ownership is not anticipated to impact access or wilderness and recreational activities.

21. DENSITY AND DISTRIBUTION OF POPULATION AND HOUSING:

Estimate population changes and additional housing the project would require. Identify cumulative effects to population and housing

The foothill country along the Rocky Mountain Front containing the Blackleaf WMA is sparsely populated with isolated ranches and farms existing on adjacent private lands. Wildlife management is prohibitive to increases in population or housing.

Alternative A (No Action) – Montana FWP will continue to manage the Trust Parcels in the same fashion under the current lease agreement. No impacts to density and distribution of population and housing would occur as a result of the no-action alternative.

Alternative B (Proposed Action) – The proposal does not include any changes to housing or developments. The nominating lessee has indicated that the lands would continue as wildlife management and grazing lands, if they purchase them at auction. No effects are anticipated.

22. SOCIAL STRUCTURES AND MORES:

Identify potential disruption of native or traditional lifestyles or communities.

There are no native, unique or traditional lifestyles or communities in the vicinity that would be impacted by the proposal.

23. CULTURAL UNIQUENESS AND DIVERSITY:

How would the action affect any unique quality of the area?

The State Trust land in this proposal is currently managed for wildlife management with occasional grazing of livestock. With the exception of isolated ranches and farms existing on adjacent private lands, the State land is generally indistinguishable from the adjacent private lands with little uniqueness in quality.

Alternative A (No Action) – Montana FWP will continue to manage the Trust Parcels in the same fashion under the current lease agreement. No impacts to cultural uniqueness and diversity would occur as a result of the no-action alternative.

Alternative B (Proposed Action) – The potential sale of the state land would not impact cultural uniqueness or diversity. It is unknown what changes to management activities may take place on the lands if ownership is transferred. The tracts were nominated by the DNRC with the intent of selling these parcels to FWP and continuing use as a wildlife management area.

24. OTHER APPROPRIATE SOCIAL AND ECONOMIC CIRCUMSTANCES:

Estimate the return to the trust. Include appropriate economic analysis. Identify potential future uses for the analysis area other than existing management. Identify cumulative economic and social effects likely to occur as a result of the proposed action.

The table below indicates current revenue generated from the nominated lands for land banking.

Legal	Acres	2015 Lease Income	Income per acre-
See above list(s)	639.48	1,743.61	\$2.73

The statewide stocking rate for grazing land on 4.1 million acres averages 0.24 AUMs per acre or a total of 968,000 AUMs (2014 DNRC Annual Report). 2014 statewide grazing land gross revenue was \$11,607,840.00 or (\$11.99 per AUM) on 4.1 million grazing acres for an average income of \$2.83 per acre (2014 DNRC Annual Report). The tracts nominated for sale are lower than the average statewide stocking rate 0.19 AUMs/ac and have a lower than average statewide income for grazing land \$2.73/acre. The tracts proposed to sell are small and isolated which creates management problems for the state and are generally not efficient to administer. In addition, these tracts are essential for FWP's Blackleaf WMA.

From 2006-2015, 880.00 acres in Teton County have been sold through the land banking process. This resulted in a total sale value of \$615,000.00 or \$698.86 per acre in Teton County.

An appraisal of the property value has not been completed to date. Under DNRC rules, an appraisal would be conducted if preliminary approval to proceed is granted by the Board of Land Commissioners. The Department is conducting more detailed evaluations at this time in order to make a determination on whether to offer the tracts for

sale. The revenue generated from the sale of these parcels would be combined with other revenue in the Land Banking Account to purchase replacement property for the benefit of the Trust. It is anticipated the replacement property would have legal access and be adjacent to other Trust lands which would provide greater management opportunities and income. If replacement property was not purchased prior to the expiration of the statute, the revenue would be deposited into the permanent trust for investment.

Scattered DNRC ownership within FWP – WMA results in long term management difficulties for both state agencies. Cumulatively, these tracts provide adequate return to the trust beneficiaries, while FWP considers these DNRC in holdings essential to the future term management of the WMA. These DNRC tracts are unlikely to be used for any other purpose and future leasing options, under competitive terms, is very limited. The sale of these tracts to FWP is logical due to the limited future management options for DNRC. Through the land banking sale, DNRC can use the proceeds to purchase replacement properties with a higher rate of return, which simultaneously provide public access for recreation, and general wildlife habitat.

EA Checklist Prepared By:	Name: Tony Nickol / Erik Eneboe	Date: June 18, 2015
	Title: Conrad Unit Office, Central Land Office	

V. FINDING

25. ALTERNATIVE SELECTED:

Alternative A

26. SIGNIFICANCE OF POTENTIAL IMPACTS:

The process of completing the EA checklist did not identify significant potential impacts. The sale will allow FWP to manage at their discretion

27. NEED FOR FURTHER ENVIRONMENTAL ANALYSIS:

Multiple comments were received concerning the ability of potential third party to outbid the FWP:

Under the Land Banking sale program, FWP as the lessee and nominator of the sale parcels is afforded the ability to stop the sale process up to ten days before the auction occurs. Any parties wishing to bid on the sale parcels at a Land Banking auction have to submit a bid deposit of 20% of the minimum bid price, 20 days before the auction. FWP would know beforehand if there would be any competitive bidders for the parcels, and would be able to cancel the auction up to ten days before the scheduled auction.

Additionally, DNRC is selling the land in three separate sale units. All DNRC's lands (8208.78 acres) within Lewis and Clark County (Sun River and Beartooth) will be sold as a single sale. Separate sales will take place for the single tract located in Cascade County (640 acres) and one sale for the three parcels in Teton County (639.48 acres).

Comments were received stating DNRC should give the land to FWP or DNRC should keep the land and allow the FWP to use the land at no cost to meet FWP's needs:

The DNRC is provided direction for the sale of lands and leasing of lands in the Montana Constitution. Specifically, Article 10, Section 11 of the Montana Constitution states: "**Public land trust, disposition...**(2) No such land or any estate or interest therein shall ever be disposed of except in pursuance of general laws providing for such disposition, or until the full market value of the estate or interest disposed of, to be ascertained in such manner as may be provided by law, has been paid or safely secured to the state..."

Comments were received questioning the ability of the DNRC to sell land with legal access:

The DNRC is provided direction for the sale of legally accessible lands by: "**MCA 77-2-363. Land banking land sales and limitations -- sale preparation costs.** (1) (a) The board may not cumulatively sell or dispose of more than 250,000 acres of state land. Seventy-five percent of the acreage cumulatively sold must be isolated parcels that do not have a legal right of access by the public". The Land Board can sell up to 62,500 acres of legally accessible land through the Land Banking program. To date, the Board has sold a total of 10,996 acres of legally accessible land, sale of these parcels would increase the total acres of legally accessible land sold to 20,484, well below the 62,500 acre limit.

Comments were received questioning how the DNRC sets the minimum value of the land to be sold and/or concerned with DNRC selling the land at too low of a value.

Under land banking the estimated fair market value of sale parcels must be determined by a Montana-Licensed and Montana-Certified General Appraiser. The appraisal must be completed in compliance with the Uniform Standards of Professional Appraisal Practice (USPAP), as adopted by reference by the State Board of Real Estate Appraisers in ARM 24.207.402. The appraiser must determine a highest and best use of the parcel, and value the parcel using comparable sales with the same or similar highest and best use. If the parcel does not have legal access, the appraiser is to value the property as if it does have legal access. The DNRC reviews or contracts the review of the appraisal, the appraised market value is then recommended to the Land Board as the minimum bid for a parcel.

Numerous comments were received outside the scope of this project.
