

CHECKLIST ENVIRONMENTAL ASSESSMENT

Project Name:	2007 Land Banking – Conrad Unit – CLO – Sec. 23, T30N, R6W
Proposed Implementation Date:	2008
Proponent:	This tract was nominated by the lessee, Sheble Ranch Inc and brought forward now by DNRC.
Location:	T30N, R6W, Section 23, Lots 2,3,4,5 Total Acres: 106.29
County:	Pondera County
Trust:	Common Schools

I. TYPE AND PURPOSE OF ACTION

Offer for Sale at Public Auction 106.29 acres of state land currently held in trust for the benefit of Common Schools. Revenue from the sale would be deposited in a special account, with monies from other sales around the State, to purchase replacement lands meeting acquisition criteria related to legal access, productivity, potential income and proximity to existing state ownership which would then be held in trust for the benefit of the same beneficiary Trusts in relative proportion. The proposed sale is part of a program called Land Banking authorized by the 2003 Legislature, and updated by the 2007 Legislature. The purpose of the program is for the Department of Natural Resources and Conservation to overall, diversify uses of land holdings of the various Trusts, improve the sustained rate of return to the Trusts, improve access to state trust land and consolidate ownership. Two maps are attached to this EA checklist: 1. Labeled "Pondera County – Land Banking Priorities" is a general map of all state land within the county (blue) and those parcels of land considered for sale under land banking (red). 2. Labeled "Appendix B" is a satellite imagery map that indicates the tract considered for sale in the EA checklist.

II. PROJECT DEVELOPMENT

1. PUBLIC INVOLVEMENT, AGENCIES, GROUPS OR INDIVIDUALS CONTACTED:

Provide a brief chronology of the scoping and ongoing involvement for this project.

- A letter was distributed in September 2004 to all state surface lessees informing them of the Land Banking Program and requesting nominations be submitted by lessees between October 1, 2004 and January 31, 2005. *(These tracts were nominated at that time and are now being considered as part of the second Statewide round of Land banking sales.)*
- Legal notices were published in the in the Great Falls Tribune on 11/4/2007 and 11/11/2007, Pondera County Independent Observer on 11/1/2007 and 11/8/2007.
- Direct mailings were made to lessees, adjacent land owners, County Commissioners, State Legislators (from the involved Districts and who were associated with the legislation), and a host of organizations and individuals who had expressed previous interest in this process. A full listing of contacts is attached as Appendix C.
- Follow-up contacts were made by phone, mail, or email with parties requesting additional information. These are also included in Appendix C.
- The tracts were also posted on the DNRC web page at, <http://dnrc/mt.gov/TLMSPublic/LandBanking/LBTest.aspx>

2. OTHER GOVERNMENTAL AGENCIES WITH JURISDICTION, LIST OF PERMITS NEEDED:

No other governmental agencies have jurisdiction over this proposal.

3. ALTERNATIVES CONSIDERED:

Alternative A (No Action) – Under this alternative, the State retains the existing land ownership pattern and would not sell the 106.26 acres of Common School Trust Land contained in Sec. 23, T30N, R6W.

Alternative B (the Proposed action) – Under this alternative, the Department would request and recommend approval by the Land Board to sell the proposed land locked tract. If approved by the Board, the sale would be at public auction, subject to the requirements found in Title 77, Chapter 2, Part 3 of the Montana Codes Annotated. The income from the sale would be pooled with other land sale receipts from across the State to fund the purchase of other state land, easements, or improvements for the beneficiaries of the respective trusts. *(The State would then review available lands for sale which would generally have access and an increased potential for income. A separate public scoping and review would be conducted when a potentially suitable parcel was found. It is not possible for this analysis to make any direct parcel to parcel comparisons.)*

III. IMPACTS ON THE PHYSICAL ENVIRONMENT

- | |
|--|
| <ul style="list-style-type: none">• <i>RESOURCES potentially impacted are listed on the form, followed by common issues that would be considered.</i>• <i>Explain POTENTIAL IMPACTS AND MITIGATIONS following each resource heading.</i>• <i>Enter "NONE" if no impacts are identified or the resource is not present.</i> |
|--|
-

4. GEOLOGY AND SOIL QUALITY, STABILITY AND MOISTURE:

Consider the presence of fragile, compactable or unstable soils. Identify unusual geologic features. Specify any special reclamation considerations. Identify any cumulative impacts to soils.

A variety of soil types are found across this tract. USDA – NRCS soil survey indicated Land Capability Classification as a mixture of 3E, 4E, and 7E soils. The majority of the acres are class 7E soils, which are shallow in nature and not suitable for crop production. The majority of the acres would not meet current DNRC breaking criteria, nor make for viable cropland. *("If properly managed, soils in classes 1, 2, 3, 4 are suitable for the mechanized production of commonly grown field crops and for pasture and woodland. The degree of the soil limitations affecting the production of cultivated crops increases progressively from class 1 to class 5. The limitations can affect levels of production and the risk of permanent soil deterioration caused by erosion and other factors. Soils in classes 5, 6, 7 are generally not suitable for mechanized productions without special management. Capability subclasses indicate the dominant limitations in the class, E, shows that the main hazard is the risk of erosion unless a close growing plant cover is maintained." From USDA-NRCS Soil Survey).* 16.7 acres have been previously broke, but are now in CRP (8.7 acres) and tame grass pasture (8.2 acres). Topography on the west side of the tract and areas adjacent to Birch Creek are steep breaks. Topography on the ease side of the tract is gently rolling to flat. Soils are stable due to the permanent vegetation cover. The proposal does not involve any on the ground disturbance, so there are no soil effect differences between the alternatives. It is expected that this land will be used for livestock grazing in the future. The State owns, and would retain ownership of, all mineral rights associated with this tract.

5. WATER QUALITY, QUANTITY AND DISTRIBUTION:

Identify important surface or groundwater resources. Consider the potential for violation of ambient water quality standards, drinking water maximum contaminant levels, or degradation of water quality. Identify cumulative effects to water resources.

Birch Creek a perennial stream borders this tract on the west side. There are no documented and/or recorded water rights associated with the proposed tract for sale. Eight (8) shares (one share equals 18" of water for one acre per year) of Pondera County Canal and Reservoir Company irrigation water are assigned to this tract to irrigate 8 acres of tame pasture. If this tract is sold, the 8 irrigation shares can be transferred to other state land within the irrigation district.

6. AIR QUALITY:

What pollutants or particulate would be produced? Identify air quality regulations or zones (e.g. Class I air shed) the project would influence. Identify cumulative effects to air quality.

The proposal does not include any on-the-ground activities, or changes to activities. No effects to air quality would occur.

7. VEGETATION COVER, QUANTITY AND QUALITY:

What changes would the action cause to vegetative communities? Consider rare plants or cover types that would be affected. Identify cumulative effects to vegetation.

This tract contains a mixture of native rangeland (89.29 acres), CRP (8.8 acres) and tame pasture (8.2 acres). Native rangeland is typical of the Northern Mixed Grassed Prairie. Range sites are dominated by thin hilly and shallow types. Species composition is dominated by grasses which include western wheatgrass, needle and thread grass, green needle grass, blue grama, thread leaf sedge, sandberg bluegrass and prairie junegrass. Sub-dominate species include various forbs and shrubs. 8.8 acres of CRP are seeded to a mixture of tame grass and alfalfa. 8.2 acres of tame pasture is irrigated by a center pivot and is seeded to a mixture of tame grass and alfalfa. Noxious weeds have not been identified on this tract according to previous inspections. However, spotted knapweed and leafy spurge are both major problems on the Birch Creek flood plain above and below this tract. Current range condition is good with an estimated carrying capacity or stocking rate assessed at .21 AUMs per acre for native rangeland portions. Irrigated tame pasture is rated at 3 AUMs per acre. CRP contracts do not allow for grazing and therefore AUMs are not assessed for these acres.

Vegetation may be affected by numerous land management activities including livestock grazing, development, wildlife management or other agricultural use. It is unknown what land use activities may be associated with a change in ownership; however the vegetation on this tract is typical of a land throughout the vicinity and there are no known rare, unique cover types or vegetation on this tract. It is expected that this land will be used for grazing livestock in the future. The nominating lessee has indicated that if they purchased this tract the land use would remain as grazing land. The proposal does not include any on-the-ground activities, or changes to activities and therefore we do not expect direct or cumulative effects would occur to vegetation as a result of the proposal.

8. TERRESTRIAL, AVIAN AND AQUATIC LIFE AND HABITATS:

Consider substantial habitat values and use of the area by wildlife, birds or fish. Identify cumulative effects to fish and wildlife.

The area is not considered critical wildlife habitat. However, this tract provides habitat for a variety of big game species (mule deer, whitetail deer, pronghorn antelope), predators (coyote, fox, badger), upland game birds (sharp tail grouse, Hungarian partridge), other non-game mammals, raptors and various songbirds. The proposal does not include any land use change which would yield changes to the wildlife habitat. The proposed action will not impact wildlife forage, cover, or traveling corridors. Nor will this action change the juxtaposition of wildlife forage, water, or hiding and thermal cover.

The nominating lessee has indicated that if they purchased this tract, the land use would remain as grazing land. There are no unique or critical wildlife habitats associated with the state tract and we do not expect direct or cumulative wildlife impacts would occur as a result of implementing the proposal. The proposed action will not have long-term negative affects on existing wildlife species and/or wildlife habitat because of its relatively small scale.

9. UNIQUE, ENDANGERED, FRAGILE OR LIMITED ENVIRONMENTAL RESOURCES:

Consider any federally listed threatened or endangered species or habitat identified in the project area. Determine effects to wetlands. Consider Sensitive Species or Species of special concern. Identify cumulative effects to these species and their habitat.

No specific on-site observations of Threatened or Endangered species have been recorded and no important habitat has been identified on the state lands. A review of Natural Heritage data through NRIS was conducted and Piping Plover was a species of special concerns in the area.

The proposal does not include any activities which would alter any habitat, so no effects are expected in either alternative.

10. HISTORICAL AND ARCHAEOLOGICAL SITES:

Identify and determine effects to historical, archaeological or paleontological resources.

No archaeological sites were identified from past DNRC field evaluation forms. A class III level inventory and subsequent evaluation of cultural and paleontologic resources will be carried out if preliminary approval of the parcel nomination by the Board of Commissioners is received. Based on the results of the Class III inventory/evaluation the DNRC will, in consultation with the Montana State Historic Preservation Officer, assess direct and cumulative impacts.

11. AESTHETICS:

Determine if the project is located on a prominent topographic feature, or may be visible from populated or scenic areas. What level of noise, light or visual change would be produced? Identify cumulative effects to aesthetics.

This tract is located in a rural agricultural area and not highly visible from a county road. The state land does not provide any unique scenic qualities not also provided on adjacent private lands. The proposal does not include any on-the-ground activities, so there would be no change to the aesthetics in either alternative.

12. DEMANDS ON ENVIRONMENTAL RESOURCES OF LAND, WATER, AIR OR ENERGY:

Determine the amount of limited resources the project would require. Identify other activities nearby that the project would affect. Identify cumulative effects to environmental resources.

There are 5,165,870 acres of Trust land and more than 4.6 million acres of Common School surface ownership in Montana (TLMS power search, 11/29/2007). There are approximately 57,347 acres of Trust land in Pondera County. This proposal includes 106.29 acres, a small percentage of the state land within Pondera County.

There are additional tracts of state land currently under consideration for sale through the Land Banking Program. An additional 240 acres of state land in Pondera County, and approximately 20,000 acres statewide are being evaluated under separate analysis. Cumulatively, these lands considered for sale represent 0.6% of the State Trust surface ownership in Pondera County, and 0.006% of the statewide Trust surface ownership.

The potential transfer of ownership will not have any impact or demands on environmental resources of Land water, air or energy.

13. OTHER ENVIRONMENTAL DOCUMENTS PERTINENT TO THE AREA:

List other studies, plans or projects on this tract. Determine cumulative impacts likely to occur as a result of current private, state or federal actions in the analysis area, and from future proposed state actions in the analysis area that are under MEPA review (scoped) or permitting review by any state agency.

There are no other projects or plans being considered on the tract listed on this EA.

There are 5 tracts containing 346.29 acres in Pondera County proposed for sale under the Land Banking Program and being evaluated under separate review.

IV. IMPACTS ON THE HUMAN POPULATION

- *RESOURCES potentially impacted are listed on the form, followed by common issues that would be considered.*
- *Explain POTENTIAL IMPACTS AND MITIGATIONS following each resource heading.*
- *Enter "NONE" if no impacts are identified or the resource is not present.*

14. HUMAN HEALTH AND SAFETY:

Identify any health and safety risks posed by the project.

No impacts to human health and safety would occur as a result of the proposal.

15. INDUSTRIAL, COMMERCIAL AND AGRICULTURE ACTIVITIES AND PRODUCTION:

Identify how the project would add to or alter these activities.

The tract included in this proposal is leased by Sheble Ranch Inc. for grazing. Sale of the land to Sheble Ranch Inc. would add to their ranching operations. Below is a table that indicates the State rated carrying capacity of the tract being considered for sale.

Legal	acres	Lease #	State rated carrying capacity
Sec 23 (native rangeland)	89.29	10182	19 AUMs
Tame pasture (irrigated)	8.2		25 AUMs
CRP	8.8		0

This proposal does not include any specific changes to the agricultural activities. The nominating lessee indicated that grazing would continue unchanged if they purchased these lands.

No direct or cumulative impacts are anticipated as a result of the proposal.

16. QUANTITY AND DISTRIBUTION OF EMPLOYMENT:

Estimate the number of jobs the project would create, move or eliminate. Identify cumulative effects to the employment market.

The proposal would have no effect on quantity and distribution of employment.

17. LOCAL AND STATE TAX BASE AND TAX REVENUES:

Estimate tax revenue the project would create or eliminate. Identify cumulative effects to taxes and revenue.

State School Trust Lands are currently exempt from property tax. If State Trust Lands represent 6% or greater of the total acres within a county, a payment in lieu of taxes (PLT) is made to the counties to mitigate for the State Trust Land tax exempt status. Counties will not realize an adjustment in the PLT payment as a result of an increase or decrease in State Trust Land acreage. If all the parcels in this proposal are sold, and use continued as grazing land, Pondera County would receive \$61.65 annually in additional property tax revenues.

18. DEMAND FOR GOVERNMENT SERVICES:

Estimate increases in traffic and changes to traffic patterns. What changes would be needed to fire protection, police, schools, etc.? Identify cumulative effects of this and other projects on government services

Being remote grazing lands, no traffic changes would be anticipated. All state and private land are under the County Coop wildfire protection program. The proposed sale will not change fire protections in the area.

19. LOCALLY ADOPTED ENVIRONMENTAL PLANS AND GOALS:

List State, County, City, USFS, BLM, Tribal, and other zoning or management plans, and identify how they would affect this project.

This tract is surrounded by private land on the north and east side and the Blackfeet Indian Reservation on the west side. There are no zoning or other agency management plans affecting these lands.

20. ACCESS TO AND QUALITY OF RECREATIONAL AND WILDERNESS ACTIVITIES:

Identify any wilderness or recreational areas nearby or access routes through this tract. Determine the effects of the project on recreational potential within the tract. Identify cumulative effects to recreational and wilderness activities.

Montana FWP commented that “FWP would recommend not disposing of lands that are generally available (accessible) to the recreating public”. This tract is surrounded by private land on 2 sides (north and east) and the Blackfeet Indian Reservation on the west side. The tract is legally accessible only by foot between low water marks along Birch Creek. Legal access to the tract would require walking along Birch Creek from the Birch Creek Bridge on the Valier – Cut Bank highway south approximately one (1) mile. There is no road access or other legal access legal access to this tract. Because this tract is small with not road access, public use is very limited. Therefore, it is concluded that the disposition of this tract would not substantially reduce public access or general recreational use in the immediate area because access to this tract is essentially controlled by the adjacent private land owners. If the tract is sold, access would be controlled by the new landowner as is the current situation.

21. DENSITY AND DISTRIBUTION OF POPULATION AND HOUSING:

Estimate population changes and additional housing the project would require. Identify cumulative effects to population and housing

The proposal does not include any changes to housing or developments. The nominating lessee has indicated that the lands would continue as grazing lands, if they purchase them at auction. No effects are anticipated.

22. SOCIAL STRUCTURES AND MORES:

Identify potential disruption of native or traditional lifestyles or communities.

There are no native, unique or traditional lifestyles or communities in the vicinity that would be impacted by the proposal.

23. CULTURAL UNIQUENESS AND DIVERSITY:

How would the action affect any unique quality of the area?

The State Trust lands in this proposal are currently managed for grazing. The State lands are generally indistinguishable from the adjacent private lands, with no unique quality.

The potential sale of the state land would not directly or cumulatively impact cultural uniqueness or diversity. It is unknown what management activities would take place on the land if ownership was transferred. The tract was nominated by the lessee with the intent of purchasing and continuing use as grazing land.

24. OTHER APPROPRIATE SOCIAL AND ECONOMIC CIRCUMSTANCES:

Estimate the return to the trust. Include appropriate economic analysis. Identify potential future uses for the analysis area other than existing management. Identify cumulative economic and social effects likely to occur as a result of the proposed action.

legal	acres	2007 Lease Income	Income per acre
Sec 23 (native)	89.29	\$133.19	\$1.49
Tame Pasture (irr)	8.2	\$175.25	\$21.37
CRP	8.8	\$203.48	\$23.12

The statewide stocking rate for grazing land on 4.3 million acres averages .26 AUMs per acre or a total of 1.11 million AUMs (2006 DNRC Annual Report). 2006 statewide grazing land gross revenue was \$6.98 million (\$6.99 per AUM) on 4.3 million grazing acres for an average income of \$1.62 per acre (2006 DNRC annual Report). 2006 state wide agricultural land gross revenue was \$9.87 million on 571,000 acres for an average income of \$17.28 per acre (2006 DNRC annual report). Combined agricultural and grazing income in 2006 on 4.871 million acres averaged of \$3.46 per acre. In 2007, on average, this tract produced \$4.81 per acre which is above the statewide average income for agricultural and grazing land. However, the majority of the tract is native rangeland and has below average revenue (\$1.49 / per acre). Although there are 8.2 acres of irrigated tame pasture and 8.8 of CRP on this tract, which produce favorable income to the trust, these are small fields and difficult to manager. Couple with the fact that this tract is not accessible for grazing and agricultural purposes, future competitive bids are not likely. Thus, it is in the best interest of the trust beneficiaries to sell this tract.

An appraisal of the property value has not been completed to date. Under DNRC rules, an appraisal would be conducted if preliminary approval to proceed is granted by the Board of Land Commissioners. The Department is conducting more detailed evaluations at this time in order to make a determination on whether to offer the tract for sale. The revenue generated from the sale of these parcels would be combined with other revenue in the Land Banking Account to purchase replacement property for the benefit of the Trust. It is anticipated the replacement property would have legal access and be adjacent to other Trust lands which would provide greater management opportunities and income. If replacement property was not purchased prior to the expiration of the statute, the revenue would be deposited into the permanent trust for investment.

EA Checklist Prepared By:	Name: ERIK ENEBOE	Date: January 18, 2008
	Title: Conrad Unit Manager, Central Land Office	

V. FINDING

25. ALTERNATIVE SELECTED:

I have selected the Proposed Alternative B, recommend the tract receive preliminary approval for sale and continue with the Land Banking process.

26. SIGNIFICANCE OF POTENTIAL IMPACTS:

I have evaluated the comments received and potential environment affects and have determined significant environmental effects would not result from the proposed land sale. The tract does not have any unique characteristics, critical habitat or environmental conditions indicating the tract should necessarily remain under management by the Department of Natural Resources and Conservation. There are no indications the tract would produce substantially greater revenue or have substantially greater value to the trust in the near future.

This tract is entirely surrounded by private lands which control access to the state land and which will likely remain unchanged if the parcel is sold. It is likely the tract will continue to be managed in a manner consistent with the surrounding private land.
